Calcite pH Neutralizer Filter

Description-

Calcite is a granular filter media used to neutralize acidic waters and raise the pH, making the water less corrosive. When water with an acidic pH of below 7.0 is passed through the filter bed the pH value is corrected enough to reach a non-corrosive equilibrium. Calcite is dissolved during the service run and will need to be periodically replaced. To raise very low pH waters (4.5-6.0 pH)

What's Included-

- Installation and labor fees
- 2 Cubic Foot of Calcite Media
- 12X52 Inch Mineral Tank
- Down-flow In and Out Valve with Backwash

Specifications-

Brand: Clack

Maintenance-

Replace internal media approximately every 3 years- contact us for future pricing *dependent upon the economy

*Quoted prices include basic installation; homeowner will be made aware of any additional charged required to complete installation if applicable when job site is assessed.

*Sale includes 1-year labor warranty and 3-year parts warranty
